DETAILED ACTION

1. Prosecution on the merits of this application is reopened on claims 1-12, 14-20 and 22-25 considered unpatentable for the reasons indicated below:

The indicated allowability of the claim is withdrawn in view of the newly discovered reference(s) to Early et al. Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-12, 14-20 and 22-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Winfree et al. (US 6 439 503) in view of Early et al. (US 6 382 957).

Winfree discloses pulse detonation wave engine having a plurality of detonation banks, each bank having a plurality of detonation chambers for receiving fuel/oxidizer mixture from a source, and ignited by laser subsystems generating a plurality of optical pulses (as generally depicted in Fig 1), however does not disclose an laser transport subsystem for distributing the pulses from an independent and positioned apart ignition subsystem to the chambers in a repeated fashion.

Art Unit: 3644

Early discloses a laser ignition subsystem for a pulse detonation wave engine using optical pulses from an independent and positioned apart source to the chambers in a repeated fashion via optical fibers and multiplexing devices (as seen in Fig 6, 10 is remote from the chambers and provide optical pulses for ignition) to provide a compact, durable laser system by providing a single laser source for one or more ignition chambers (abstract).

It would have been obvious to a person having ordinary skill in the art at the time the invention was made to have modified Winfree to use a remote laser source and laser transport subsystem as taught by Early to provide a compact, durable laser system by providing a single laser source for one or more ignition chambers.

Conclusion

4. Applicant is advised that the Notice of Allowance mailed 14 June 2005 is vacated. If the issue fee has already been paid, applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied. If abandoned, applicant may request refund or credit to a specified Deposit Account.
